EDUCATION

Pamantasan ng Lungsod ng Maynila August 2026
Bachelor of Science in Information Technology Magna Cum Laude
Relevant Coursework: Software Development, Web Development, Database Management, Data Analytics, Business Analytics, Project Management, Software Engineering, APIs, Cloud Integrations, Software Quality Assurance

WORK EXPERIENCE

Bank of the Philippine Islands | Integrations and Orchestrations Platform Intern February 2026 – May 2026
Makati City, Metro Manila

- Authored and pitched comprehensive digital transformation project proposals to key corporate stakeholders, aligning technical platform initiatives with overarching institutional goals.
- Developed and structured detailed Business Requirement Documents (BRDs) and complex system use cases, establishing clear project scopes and actionable roadmaps for the development team.
- Formulated and validated precise API contract specifications using Postman, streamlining backend integration requirements and ensuring data reliability across platform workflows.
- Designed and developed high-fidelity Figma prototypes and responsive React interfaces, bridging the gap between UI/UX design and production-ready frontend code.

PROJECTS

3Whites | Mobile App Developer & AR Integration Engineer January 2025 – June 2025

Project Overview: AI-Driven Powerlifting & Progress Tracking Android Application

- Mobile Frontend Engineering: Built and deployed responsive UI interfaces for an Android application, ensuring smooth user onboarding and clear visual layouts for automated progress tracking.
- AR Optimization & Bar Path Tracking: Refactored core Augmented Reality (AR) component logic to eliminate performance bottlenecks and frame latency, delivering real-time, fluid bar path trajectory visualization for athletes.

TechSync | Front-end Developer and Project Manager June 2025 – November 2025

Project Overview: AI-Powered Developer Collaboration & Upskilling Platform

- Directed and managed the end-to-end development lifecycle using Agile Kanban methodologies, ensuring strict adherence to team timelines, project milestones, and successful platform delivery.
- Developed a collaborative learning platform focused on streamlining developer workflows and professional growth.
- Implemented a Skill-Matching Algorithm that dynamically suggests independent projects and learning paths based on detected proficiency levels.

Athlete Pulse | Full-Stack Mobile Developer June 2026 – Present

Project Overview: AI-Powered Cross-Platform Fitness & Nutrition Tracking Application

- Engineered an AI-powered onboarding and routine generation engine using Google Gemini 2.5 Flash and Mifflin-St Jeor algorithms to synthesize personalized workout splits and TDEE macronutrient targets with PWA client-side caching fallback.
- Built a cross-platform 2x Retina graphic export pipeline leveraging react-native-view-shot and html2canvas for sharable workout receipts, supported by a PWA architecture with AsyncStorage client caching, metric/imperial unit normalization, and background session persistence.

MindCare | Frontend Developer November 2025

Project Overview: AI-Assisted Psychiatric Appointment Scheduling & Mental Wellness Platform

- Spearheaded agile project workflows and designed an end-to-end psychiatric booking system integrating dynamic provider availability schedules, automated status transitions, and role-based access for patients and clinicians.
- Architected an AI-driven mental health triage engine utilizing structured prompt schemas to evaluate patient stress indicators, generating calibrated severity scores alongside actionable, non-clinical intervention strategies.
- Engineered a scalable PostgreSQL backend on Supabase with Row Level Security (RLS) policies across users, clinical evaluations, and appointments, coupled with a responsive frontend built for low-friction patient onboarding.

TECHNICAL SKILLS

Languages and Frameworks: JavaScript, Next.js, React.js, Node.js, Postman, PostgreSQL, Vite, MySQL, HTML5, CSS, TailwindCSS, XML, Kotlin

Tools: VS Code, Figma, Android Studio, Github, Jira, Codex, ChatGPT, Claude, Gemini, Google AI Studio, Microsoft PowerBI, Tableau, Excel, MySQL Workbench
